State TOI: LTC03I Individual Long Term Care

Filing Description:

The purpose of this filing is to request a rate increase on our Long Term Care insurance policy form 2006-LTC-COMP(PA) and associated riders, which were approved by the Department on March 8, 2007.

The Company is requesting a cumulative rate increase of 29.96%, with a 14% increase to be implemented in the first year and an additional 14% increase to be implemented 1 year later.

CMFG Life is seeking rate increases on its Long Term Care Insurance (LTC) products because current estimates of lifetime loss ratios are in excess of expected. This rate filing is not intended to be used for other purposes.

CMFG Life has requested or intends to request a 100-150% rate increase in all states and the District of Columbia. In states where the entire increase is not acceptable all at one time, an additional rate increase will be requested in successive years.

Once state approval is received, action will be taken to implement the rate increase in a timely manner. We will offer affected policyowners some alternative options to reduce their benefits in order to possibly maintain their current premium levels. We are also offering coverage under the contingent benefit upon lapse option to any policyholder whose policy lapses within 120 days of the rate increase effective date, regardless of the attained age of the policyholder and cumulative percentage of rate increases that have been applied to the policy.

Attached to the Supporting Documentation tab is the actuarial memorandum with corresponding appendices to support this request. New rate tables for this form are attached to the Rate/Rule Schedule tab with a cumulative 29.96% increase applied.

CMFG Life no longer markets Long Term Care insurance in any state.

Please find attached our policyholder communication regarding the rate increase. The first document, titled "02 06 2020-0401 STD," provides information about the rate increase. The second document, titled "2019-LTC-CHANGE (bracketed)," accompanies the first document and provides detailed information about benefit change options specific to each policyholder. Additionally, there are two Explanation of Variables that describe each of the respective document's variable information.

Thank you for your attention to this submission.

Actuarial Memorandum Supporting Rate Revision for CMFG Life Insurance Company Individual Long-Term Care Insurance Plan 2006 Product (Page 1 of 5)

1. SCOPE AND PURPOSE

The purpose of this memorandum is to provide actuarial information supporting a rate revision to premiums for CMFG Life Insurance Company's (the Company) individual long-term care product form series 2006-LTC-COMP and associated riders. This product is referred to as the 2006 Product. (Some riders may not be available in all states.)

This product was sold nationwide from 2006 to 2010 and is no longer being marketed in any state.

The Company is requesting a 29.96% rate increase, consisting of an initial 14% rate increase followed by an additional 14% increase one year later. The rate increase is necessary because the current estimate of the nationwide lifetime loss ratio is in excess of expected. This rate filing is not intended to be used for other purposes.

The body of this actuarial memorandum was written to apply to all states where this product was issued. Any reference to information that is specific to a particular state is included in Appendix A.

Please refer to Section 27 for a description of the information contained in each Appendix.

2. DESCRIPTION OF BENEFITS

This product provides comprehensive long-term care coverage on an expense reimbursement basis up to policy limits. A benefit period, elimination period, monthly benefit, home health care percentage and inflation protection option were selected at issue. Several additional optional benefits were available such as nonforfeiture benefits, expanded spousal benefits and limited premium payment options. The benefit eligibility criteria are based on the insured's loss of the ability to perform Activities of Daily Living (ADLs) or having a severe cognitive impairment. The available benefit choices can be found in the rate tables that accompany this filing. A complete description of the benefit provisions and conditions for eligibility is contained in the policy form and riders on file with the state.

3. RENEWABILITY CLAUSE

This product is a Guaranteed Renewable, Individual Long Term Care policy.

4. MARKETING METHOD

This product was marketed to individuals by licensed agents. This product is not currently being marketed.

5. UNDERWRITING

All policies subject to this rate revision were subject to full medical underwriting in accordance with Company standards in place at the time of issue. Those underwriting standards were taken into consideration when projecting future experience.

6. APPLICABILITY

The revised rates will be applicable to the product described in Section 1.

7. MORBIDITY

The morbidity assumptions are based on a combination of the Company's historical claim experience from 2006 through December 31, 2020, the Milliman 2017 *Long Term Care Guidelines* (*Guidelines*), and judgment. The *Guidelines* reflect 800,000 claims representing nearly \$50 billion of incurred claims and 49 million life years of exposure and the experience and judgment of Milliman actuaries. The morbidity assumptions reflect the Company's current best estimate of future morbidity, plus a 10% load to future claims for moderately adverse experience. The assumptions do not include any adverse selection resulting from the rate increase.

8. MORTALITY

Mortality assumptions are based on Company experience from 2006 through December 31, 2020 and judgment. The best estimate mortality assumption is the Annuity 2000 Mortality Table on a sex distinct basis, projected forward with mortality improvement to 2030. Mortality improvement was based on 100% of Scale G for males and 50% of Scale G for females. The ultimate mortality table in 2030 was smoothed slightly to maintain a reasonable relationship of mortality rates between males and females. Mortality selection factors are also applied, starting at 0.15 in duration 1 and grading up to 0.85 in duration 19.

9. PERSISTENCY

Voluntary lapse assumptions are based on Company experience from 2006 through December 31, 2020 and judgment. Lapse rates are combined with mortality rates to derive the total termination rate. We assumed all remaining policies would terminate at attained age 120. The lapse assumptions represent the best estimate expectations of future experience and do not include any provisions for adverse experience. Lapse rates are shown below and vary by premium payment option and policy duration.

<u>Policy</u>	Premium Paym	ent Option:
<u>Duration</u>	Limited Pay	Lifetime Pay
1	2.0%	6.0%
2	2.0	4.0
3	2.0	3.0
4	1.0	2.0
5	1.0	2.0
6	1.0	1.5
7	0.0	1.5
8	0.0	1.5
9	0.0	2.0
10+	0.0	2.0

Appendix D contains a comparison of the actual total termination rates to both the original pricing assumptions and current assumptions.

10. EXPENSES

Actuarial Memorandum Supporting Rate Revisions for CMFG Life Insurance Company Individual Long-Term Care Insurance Products September 9, 2021 Page 3

Expenses are not being projected. It is assumed that the originally filed expense assumptions are appropriate.

11. PREMIUM CLASSES

The rate revision will be applied as a consistent percentage to all premium classes.

12. ISSUE AGE RANGE

This product was available for issue ages 18 to 90. Premiums are based on issue age.

13. AREA FACTORS

The Company did not use area factors within the state in the premium scale for this product.

14. AVERAGE ANNUAL PREMIUM

The average annual premium for this product, both prior to the impact of the requested rate increase(s) and after, is indicated in Appendix A to this memorandum.

15. MODAL PREMIUM FACTORS

The modal premium factors will remain unchanged from the current factors.

16. CLAIM LIABILITY AND RESERVE

Claim reserves were calculated using appropriate actuarial methods for IBNR and for open claims on a disabled life basis. The claim reserves were discounted to the date of incurral for each claim and have been included in the historical incurred claims.

17. ACTIVE LIFE RESERVES

We have provided supporting evidence for the justification of the proposed increase based on the relationship of incurred claims divided by earned premium compared to the minimum loss ratio. Incurred claims are calculated without the impact of the change in active life reserves.

18. TREND ASSUMPTION

Benefits payable are equal to or less than the daily benefit limit. We have not included any medical trend in the projections.

19. MAXIMUM ALLOWABLE RATE INCREASE

The maximum allowable rate increase is shown in Appendix A. Appendix A shows the maximum allowable increase based on a 58% loss ratio on the initial premium and an 85% loss ratio on the increased premium. While these policies are not subject to the minimum loss ratio regulation, for reference, the maximum allowable increase based on a minimum loss ratio is also shown. The requested rate increase is less than the maximum allowed increase under either approach.

20. DISTRIBUTION OF BUSINESS

Actuarial Memorandum Supporting Rate Revisions for CMFG Life Insurance Company Individual Long-Term Care Insurance Products September 9, 2021 Page 4

The historical experience reflects the actual distribution of policies during the experience period. The projected future experience is based on a seriatim projection of the current inforce policies.

21. EXPERIENCE - PAST AND FUTURE

The historical and projected experience, both with and without the requested rate increase(s), is contained in Appendices B and C. The premium in Appendix B is shown on this state's rate basis (applying the level of this state's rate increase(s) to every state).

22. LIFETIME LOSS RATIO

The development of the anticipated nationwide lifetime loss ratio, both without a rate increase and with the requested rate increase(s), is shown in Appendix B. An annual interest rate of 4.00% was used to calculate the lifetime loss ratio in the supporting appendices and was determined based on a weighted average of statutory valuation rates by policies sold by issue year. The initial rate increase of 14% is assumed effective September 1, 2022. The second rate increase of 14% is assumed effective September 1, 2023.

23. HISTORY OF RATE ADJUSTMENTS

Please refer to Appendix A for the history of any rate adjustments that have been approved in this state.

24. NUMBER OF POLICYHOLDERS

Please refer to Appendix A for the current number of policyholders as of December 31, 2020 in this state.

25. PROPOSED EFFECTIVE DATE

This rate will be implemented as soon as possible after approval has been granted as allowed based on regulation. For policies still inside a rate guarantee period, the rate increase will become effective after the rate guarantee period has expired.

26. RELATIONSHIP OF RENEWAL PREMIUM TO NEW BUSINESS PREMIUM

The Company is no longer selling any new proprietary long-term care products. Therefore, the comparison of renewal premium rates after the rate increases to the Company's current new business premium rate schedule is not applicable.

27. SUMMARY OF APPENDICES

Appendix A contains information that is specific to the state in which this filing is made, such as the average annual premium, the number of policyholders inforce, etc.

Appendix B contains historical and projected nationwide experience for all policies issued under this product. The appendix also includes the projected lifetime loss ratios both without and with the proposed increase.

Appendix C contains the historical and projected experience of only the policies issued in the state.

Actuarial Memorandum Supporting Rate Revisions for CMFG Life Insurance Company Individual Long-Term Care Insurance Products September 9, 2021 Page 5

Appendix D contains a comparison of the actual total termination rates to both the original pricing assumptions and current assumptions.

28. ACTUARIAL CERTIFICATION

I, John Svedberg, am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries, and I meet the Academy's qualification standards for preparing health rate filings.

To the best of my knowledge and judgment this rate filing is in compliance with the applicable laws and regulations of this State as they relate to premium rate developments and revisions. This memorandum complies with all applicable Actuarial Standards of Practice, including ASOP No. 8.

The projected experience shown in this Memorandum is based on assumptions that include provisions for moderately adverse experience. If the requested premium rate schedule increases are implemented and the underlying assumptions, which reflect moderately adverse conditions, are realized, no further premium rate schedule increases are anticipated. In my opinion, the rates are not excessive or unfairly discriminatory.

Notes:

- 1) The results shown above include only lifetime pay policies (excludes single pay, 10 pay and paid-up at 65)
- 2) The "Actual Results" are the historical total policy termination rates observed by the Company.
- 3) The "Original Pricing Assumptions" are those assumptions originally used to price the product. The mortality assumptions are based on the 1983 IAM table. The original ultimate lapse assumption was 6.0% for issue ages 62 and younger and 8.0% for issue ages 63 and older.
- 4) The "Current Assumptions" are those used in the projection for the current rate filing. The mortality assumptions are based on the Annuity 2000 table projected to 2009 (Scale G 100% Male, 50% Female, no smoothing), with selection factors.
- 5) Experience is through December 31, 2020

Long Term Care Product Filing Authorization

To Whom It May Concern:

The undersigned hereby grants the following representatives of **Milliman, Inc.**, whose main office is located at 15800 Bluemound Road, Suite 100, Brookfield, Wisconsin 53005, authority to act on our behalf regarding state insurance department filings of our Long Term Care products:

Sarah Wunder Hanna Holzer Evan Pollock Dan Nitz Peter Schelble

This authorization is valid effective from the date noted above, for the duration of the filing project. If additional assistance or verification regarding this authorization is required, please contact John Svedberg, FSA, MAAA, Director, Legacy Products | Actuarial, at CMFG Life Insurance Company. He can be reached by phone at 800.356.2644, Ext 665.7055.

IN WITNESS THEREOF, the Company has caused this authorization to be in effect by the signature of its Director, Legacy Products, Actuarial.

Signature

John Svedberg
Director and Actuary, Legacy Products

CMFG Life Insurance Company Long Term Care Insurance Rate Increase Filings

SUPPLEMENTAL INFORMATION – KEY ASSUMPTIONS

CONFIDENTIAL

CMFG Life Insurance Company (CMFG Life) is seeking rate increases on its Long Term Care Insurance (LTC) products because current estimates of lifetime loss ratios are in excess of expected. Persistency experience is the *primary* driver of our higher-than-expected loss ratios.

Lapses, mortality, and morbidity business drivers are inter-related, and we have not isolated each assumption to determine the independent impact of each. Although morbidity projections are also less favorable than expected in original pricing, the overwhelming issues are lower lapse and mortality rates. As a result, the Company will ultimately pay out much more in claims than was originally expected. We are now projecting lifetime loss ratios far in excess of what was assumed when the product was priced.

Model

The projections of future experience were modeled using Milliman's modeling software, MG-ALFA. The assumptions and methodology are listed in the Actuarial Memorandum supporting the rate increase filing and described in further detail in this document. The attached file called "Model Formulas 123120.doc" provides further information on the formulas used to calculate the key components of the loss ratio. The model used the inforce policies as of 12/31/2020. The file called "DOB Exhibit.xlsx" contains a distribution of business for each product by the key demographic and benefit characteristics.

Lapse Study Details

Voluntary lapse rates were determined based on two approaches. First, "actual lapses" were determined by subtracting actual deaths from total terminations. Second, "implied lapses" were determined by subtracting expected deaths from total terminations. To the extent that the actual deaths are understated (due to incorrect coding of Social Security Numbers), actual mortality will increase under the second method, while actual lapses will decrease. The total termination rates will not change.

The lapse study is based fully upon CMFG Life's own experience, for all four proprietary LTC products, from inception. All of the business is individual; no group LTC experience is included. The study includes *only lifetime pay* policies; it excludes policies that were issued as single pay, 10 pay and paid-up at 65.

Detailed results of CMFG Life's internal lapse study are provided in the attached file called "Lapse Analysis Details (Dec 2020)". Exhibits provide the number of exposures and total terminations for each policy duration, in total (for the entire LTC block of four products), by gender, by product (for each of the four products), by marital status, and by inflation protection option. The current voluntary lapse rate assumptions are shown alongside the actual and implied voluntary lapse rates for each duration on each exhibit. Also included in this response is a file called "Total Persistency Comparisons (App D) (Dec 2020)", which contains a persistency summary. It shows a comparison of actual persistency experience to what was assumed in original pricing and to our current assumptions -- in total and by product.

Lapse experience has been higher recently than the long run expected assumption due to shock lapse from recent rate increases. We anticipate lapse rates to come down from the current elevated levels once the rate increases are complete and will match our long run assumption of 1% per year for the 1993 and 1997 Products and 2% per year for the 2002 and 2006 Products.

Mortality Study Details

The analysis was built on the exposure calculations used in our incurred claim analysis. Actual deaths were determined using two techniques. First, an individual's Social Security Number was compared against the Social Security Death Master File to identify deceased individuals. Second, the policy termination reason code of "death" was used. A terminated policy was considered a death if the policyholder was determined to have died under either approach.

Expected mortality is based upon the Annuity 2000 table projected forward using Scale G (100% for males and 50% for females), along with mortality selection factors. The 2002 and 2006 Products have slightly lower mortality experience than the 1993 and 1997 Products. The mortality selection factors for the 1993 and 1997 Products start at 0.20 in year 1, grading up by 0.1 per year to 1.0 in year 9. The mortality selection factors for the 2002 and 2006 Products start at 0.15 in duration 1 and grade to an ultimate of 0.85 in duration 19. The central point of the study period was 2009; therefore, the mortality table was projected to 2009 and used throughout the study. (Note that the *projections* assume continued mortality improvement, on same bases, to 2030.)

The mortality study is based fully upon CMFG Life's own experience, for all four proprietary LTC products, from inception. All of the business is individual; no group experience is included.

Detailed results of CMFG Life's internal mortality study are provided in the attached file called "Mortality Analysis Details (Dec 2020)". Exhibits provide the number of exposures and *total terminations* for the entire LTC block of four products, by policy duration, by attained age, by gender, by product (for each of the four products), and by marital status. "Actual to Expected" mortality ratios are shown alongside the actual and expected mortality rates on each exhibit. As noted above, also included is a file called "Total Persistency Comparisons (App D) (Dec 2020)", which contains a persistency summary. It shows a comparison of actual persistency experience to what was assumed in original pricing and to our current assumptions -- in total and by LTC plan.

Morbidity Study Details

A claim experience analysis was performed on all of the Company's LTC business in order to develop appropriate morbidity assumptions for the loss ratio projections. Projection assumptions are based on a combination of CMFG Life's LTC historical claim experience, Milliman's 2017 LTC *Guidelines* and judgment. The *Guidelines* provide a flexible, but consistent, basis for the determination of claim costs for a wide variety of long term care benefit packages and are based directly on 800,000 claims representing nearly \$50 billion of incurred claims and 49 million life years of exposure. In addition to the information provided in this section, please see the file called "Morbidity Analysis Details (Dec 2020)", included with this response.

CMFG Life's claim experience was analyzed by incidence, severity, and incurred claims. The primary finding from the claim analysis was that the Company's overall claim experience fit reasonably well to the *Guidelines*. Limited adjustments were then made to the *Guidelines*, to develop a better fit to actual experience by product.

Claim Reserve Review

As the majority of incurred claims is derived from the claim reserve (\$166 million incurred claims is made up of approximately \$92 million paid claims and \$74 remaining claim reserve), any assessment of the Company's incurred claims would be heavily impacted by the accuracy of the claim reserves. Therefore, a high level retrospective test was conducted to review the claim reserves. Historical reserve balances, along with historical claim payment amounts, were used. The claim reserve has been sufficient in all prior year-ends tested (2006-2019). Please see the

file called "Claim Reserve Retro Test – Dec 2020 Data" for further details. Given the level of sufficiency of the reserves, we dampened the reported reserves by 10% for the purposes of setting product factors.

Claim Analysis Approach

The approach to developing a set of morbidity assumptions for projections was first to establish initial Baseline Expectations, based on the underwriting, claim management practices, and benefit design for each of CMFG Life's products. The starting assumptions were based on Milliman's *Guidelines*. Next, factors were established for each of our products.

More specifically, Baseline Expectations were comprised of the following factors:

- 1) Ultimate Claim Costs Claim costs were generated using Milliman's claim cost model which reflected differences in benefit design, age, and gender.
- 2) Selection Factors The underwriting for each product was aligned to one of Milliman's underwriting categories. Underwriting for the 1993 and 1997 products was approximately done at the "Moderate" level. Underwriting for the 2002 and 2006 products was a blend of "Tight" and "Moderate" levels, with higher proportions of "Tight" as issue ages increased.
- 3) Salvage Factors Salvage factors were used to reflect that the CMFG Life maximum benefits will not be paid out, depending on the benefit design. An LTC inflation rate of 5.0% was assumed in determining the rate at which LTC expenses increase for the first 13 policy durations (and resulting salvage values). Starting in policy duration 14, the LTC inflation rate is 4.5% for skilled nursing facility, 4.0% for assisted living facility, and 3.25% for home health care settings.
- 4) Claim Management Factor Based on the level of claim management CMFG Life conducts, a 5% reduction to claims was assumed.
- 5) Area Factors For each product, the actual utilization differences by state were determined and a composite area factor was developed.
- 6) Risk Class Factors The morbidity difference for each risk class was reflected in the risk class factor. Outside of the substandard factors, the risk class factors composite approximately to 1.00.
- 7) Additional Rider Factors Several products have riders which include benefits above what is normally included in the *Guidelines*. The general approach was to apply a claim cost factor equal to the premium loads for the rider.

Table 1 shows that, overall, CMFG Life's claim experience (01/01/02 – 12/31/20) fits reasonably well to the Baseline Expectations. (Note that incurred claims on Waiver of Premium are not included in the Table 1 numbers.)

Table 1
CMFG Life LTC Products – Actual to "Baseline Expected" Claims

	<u>Actual</u>	Baseline Expected*	Actual to Expected
Life Yrs of Exposure	442,663	N/A	N/A
Count of Claims	1,737	1,716	101%
Severity per Claim	\$95,493	\$97,115	98%
Incurred Claims	\$165.9 million	\$166.7 million	100%
* The Baseline Expected is	s based on Milliman's LTC	Guidelines <u>without</u> any Produ	ct fitting factors.

Table 2 provides additional insights about the variability of experience by product. (Note that incurred claims on Waiver of Premium are not included in the Table 2 numbers.)

Table 2
CMFG Life LTC Products – Actual to "Baseline Expected" Claims (in millions)
Baseline Expected*

		Baccimo Expected	
Product	Actual Incurred	Incurred Claims	Actual to Expected
	<u>Claims</u>		
1993	\$10.2	\$10.6	96%
1997	\$29.1	\$22.4	130%
2002	\$87.1	\$93.2	94%
2006	\$39.5	\$40.5	97%
Total	\$165.9	\$166.7	100%

^{*} The Baseline Expected is based on Milliman's LTC Guidelines without any Product fitting factors.

Please note that the expected claims in Tables 1 and 2 do not include any Product fitting factors. The expected claims shown in the file "Morbidity Analysis Details (Dec2020)" do include the Product fitting factors.

8) Product Factors – The final step of the claim analysis was to review the experience by product. Since the experience of each product was not credible by itself, judgment, along with the experience on each product, was considered. The product factors are applied to all years. Table 3 shows the product factors by product.

- 1) Starting Claim Reserve is made up of ICOS, DLR, and IBNR.
 2) Claims Paid include only claim payments for claims incurred before the test valuation date.
- 3) Present Value of Paid Claims assume middle of year payment and are discounted back to the test valuation date.
 4) Remaining Claim Reserve as of 12/31/2020 for claims incurred prior to the test valuation date, discounted back to the test valuation date.

- Retrospective Test Reserve is the sum of present value of paid claims and remaining dalam reserve).
 Retrospective Test Reserve is the sum of present value of paid claim plus the present value of remaining claim reserve.
 A minor inconsistency exists between claim incurred dates. The claim reserves are based on CMFG Life's incurred date while the paid claims are based on Milliman's date.

8/5/2021 Milliman

Notes

- 1) Experience from inception through December 31, 2020
- 2) Actual Mortality Rate based on either match to Death Master File or termination reason coded as "death"
- 3) Expected Mortality Rate based on Annuity 2000 table projected to 2009 along with selection factors
- 4) Actual Voluntary Lapse Rate is the Total Termination Rate minus the Actual Mortality Rate
- 5) Implied Voluntary Lapse Rate is the Total Termination Rate minus the Expected Mortality Rate
- 6) Current Voluntary Lapse Rates are provided by CMFG Life Insurance Company
- 7) Includes only lifetime pay policies (excludes single pay, 10 pay and paid-up at 65)

Notes:

- 1) Experience from inception through December 31, 2020
- 2) Actual Mortality Rate based on either match to Death Master File or termination reason coded as "death"
- 3) Expected Mortality Rate based on Annuity 2000 table projected to 2009 along with selection factors
- 4) Actual Voluntary Lapse Rate is the Total Termination Rate minus the Actual Mortality Rate
- 5) Implied Voluntary Lapse Rate is the Total Termination Rate minus the Expected Mortality Rate
- 6) Current Voluntary Lapse Rates are provided by CMFG Life Insurance Company
- 7) Includes only lifetime pay policies (excludes single pay, 10 pay and paid-up at 65)

General Model Framework

The formulas listed below describe the calculations used in the model to determine the lifetime loss ratio. The model makes further, more complex calculations in order to consider the timing related to different modal options. The assumptions and other methodologies are further described in the Actuarial Memorandum filed with the state.

Lives Calculations

```
lx(t) = lx(t-1) * (1-qxd(t)) * (1-qxw(t)),
```

where,

lx(t) is the number of lives at time tx is the issue age of the policyqxd(t) is the mortality rate for time tqxw(t) is the voluntary lapse rate for time t

Note: Policies that exhaust benefits are also decremented from the population.

Premium Calculation

```
PP(t) = lx(t-1) * modal_premium * modal_indicator
```

EP(t) = PP(t) + [UePR(t) - UePR(t-1)]

where,

PP(t) is the paid premium in month t.

modal_indicator is the a flag used to indicate if a premium is paid during the month, based on the bill mode of the policy.

EP(t) is the earned premium in month t.

UePR(t) is the unearned premium reserve at time t.

Note: Waived premium is included in the premium calculation

Incurred Claim Calculation

```
IC(t) = Ix(t-1) * CC(t) * SF(t) * salvage(t) * clm_mgt * composite_area * risk_class * j_prime(t) * DB(t) * WOP load * product factor
```

where.

IC(t) is the incurred claims in month t

CC(t) is the claim cost per \$1 daily benefit at time t (based on the policy benefits and demographics such as product, benefit period, elimination period, type of coverage and various riders).

SF(t) is the selection factor for month t.

salvage(t) is the salvage factor for month t (reflects that the full daily benefits are not paid out).

clm_mgt is the claim management factor to reflect the level of claim management CUNA Mutual conducts.

composite_area is the composite area factor for a product to reflect the utilization differences by state (one composite factor is used for each product based on the distribution by state).

General Model Framework

Risk_class is the risk class factor which reflects the different morbidity levels for each risk class.

j-prime(t) is the factor to convert all lives (lx(t-1)) to active, healthy lives. The claim cost assumptions should only be applied to those people not already on claim.

DB(t) is the current daily benefit at time t (i.e. daily benefit increased for any inflation benefit option).

WOP_Load is the load to include waiver of premium costs in incurred claims.

product_factor is an experience adjustment factor that varies by product.

Lifetime Loss Ratio

LR = (Accum_IC + PV_IC) / (Accum_EP + PV_EP),

where,

LR is the lifetime loss ratio as of 12/31/2020.

Accum_IC is the historical incurred claims accumulated with interest to 12/31/2020.

PV IC is the future incurred claims discounted with interest to 12/31/2020.

Accum_EP is the historical earned premium accumulated with interest to 12/31/2020.

PV EP is the future earned premium discounted with interest to 12/31/2020.

For the purposes of accumulating and discounting, a middle of the year timing is assumed.

- Notes:
 1) Experience from January 1, 2002 through December 31, 2020
- 2) Paid claims represent the present value of paid claims discounted to the claim incurred date
 3) Reserve amounts represent the present value of the remaining claim reserve (including IBNR) discounted to the claim incurred rate
- 4) Severity is defined as incurred claims divided by the count of claims
- 5) Expected Claims are based on the Milliman 2017 Long-Term Care Guidelines
- 6) Claim dollar amounts are discounted using a 4.00% interest rate (both actual and expected)
- 7) Credibility Measure is based on the following formula = (Total Lives / 200,000) ^ 0.5
- 8) Expected values include product fitting factors

Notes:

- 1) Experience from January 1, 2002 through December 31, 2020
- 2) Paid claims represent the present value of paid claims discounted to the claim incurred date
- 3) Reserve amounts represent the present value of the remaining claim reserve (including IBNR) discounted to the claim incurred rate
- 4) Severity is defined as incurred claims divided by the count of claims
- 5) Expected Claims are based on the Milliman 2017 Long-Term Care Guidelines
- 6) Claim dollar amounts are discounted using a 4.00% interest rate (both actual and expected)
- 7) Credibility Measure is based on the following formula = (Total Lives / 200,000) ^ 0.5
- 8) Expected values include product fitting factors

CMFG Life Insurance Company

Date

Policyholder name Address

RE: Important Changes to Your <Partnership Approved> Long Term Care Insurance Policy Policy Number: ____

Dear Policyholder:

CMFG Life Insurance Company (CMFG) will soon increase the premium on your Long Term Care policy. The purpose of this letter is to inform you of the rate increase and explain the options that are available to you. We encourage you to contact us toll free at 1.866.245.7133 if you have questions. Our business hours are Monday-Friday 7 a.m. to 7 p.m. CST; 8 a.m. to 8 p.m. EST.

The rate increase is necessary to ensure current and future claims are adequately funded, so that long term care benefits will be available to you when you need them. The Company filed a request for a rate increase to the <State> Department of Insurance and provided justification to the Commissioner that satisfies current state laws. <A rate increase of ____% will be applied to your policy>.

This increase will be applied to all state policyholders that have the same policy form. No policyholder is ever singled out to receive a rate increase that is higher or lower than other policyholders in the same rating class. We know how important your long term care coverage is to you and understand that this premium increase may make it more difficult to continue your current level of coverage. We do not take this action lightly.

When will my premium change and what will my new premium be?

- Your premium will change on <Premium Due Date>.
- Your new premium will increase from <Old Premium Amount> to <New Premium Amount> per
 <Billing Mode> based on your current benefits.
- If your policy is currently on claim and your premiums are being waived, the premium increase will have no impact on you at this time. You will have to pay the increased premium only after you return to a premium paying status.

What are my options?

We recognize that raising premiums will impact individual policyholders in different ways. As such, there are options that you may consider at this time:

- 1. <u>Continue current level of coverage</u>: Keep your exact coverage without any changes and the new premium will take effect on the date indicated above.
- 2. <u>Adjust your coverage</u>: You may consider reducing the level of coverage to make premiums more affordable. The policy change request at the end of this letter lists some of the policy adjustments that are available as an alternative to the current plan, while still maintaining essential coverage. (Note that all options may not be of equal value. <Some benefit reduction options may result in a loss in partnership status, if applicable, and may reduce policyholder protections.>)
- 3. <u>Elect the Contingent Benefit Upon Lapse Option (CBUL)</u>. The CBUL option allows you to continue your policy automatically after lapse without further premium payments and with the same level of benefits

except for a reduction in your Maximum Benefit and termination of certain policy riders. Please refer to the termination provision in any riders purchased with your policy. You will be eligible for this coverage if your Policy lapses within 120 days of the rate increase.

<4. Continue your coverage under the Nonforfeiture Benefit Rider if included on your policy: This rider allows you to stop paying premium at any time and continue your coverage with the same level of benefits except for a reduction in your Maximum Benefit and termination of certain policy riders. Please refer to the termination provision in any riders purchased with your policy.>

Please carefully evaluate your situation and your current coverage needs before choosing any of the above options.

Premium Increase History

CMFG Life sold Long Term Care insurance between 1992 and 2010. CMFG Life no longer offers new Long Term Care insurance policies or increases to existing coverage. The following is CMFG Life's history with respect to adjusting premium rates on our Long Term Care insurance products.

Base Policy Form	Years Available	Year of Increase	Increase Range
5701	1992 – 1999	Annually from 2011-<2017>	1.5% - <75%>
97-LTC-HHC1	1997 – 2004	Annually from 2011-<2018>	1.5% - <75%>
2002-LTC-FAC	2002 – 2008	Annually from 2011-<2020>	1.5% - <150%>
2006-LTC-COMP	2006 – 2010	Annually from 2011-<2020>	1.5% - <125%>

Your policy is guaranteed renewable. This means you have the right, subject to the terms of your Policy, to continue this Policy as long as you pay your premiums on time. However, premium rates may be increased under certain conditions. The need for rate increases is related to expected future experience and not economic conditions.

Next Steps

There is nothing you need to do if you want to continue your current coverage other than pay your new premium when due. If you want to change your benefits before the effective date of the increase, you must complete and return the policy change request below within 45 days from the date of this letter. If your policy lapses and we do not hear from you, your coverage will be continued automatically under the CBUL option.

We value your business and want to thank you for choosing CMFG Life to provide your long term care coverage. We are committed to ensuring that your long term care insurance benefits are there when you need them.

Sincerely,

Long Term Care Services CMFG Life Insurance Company

CMFG Life Insurance Company Statement of Variability Policyholder Notice: 02 06 2020 0401 STD

Third sentence of paragraph two:	The third sentence in paragraph two may be replaced with one of the following paragraphs:
.	1st of 2 rate increases: An overall rate increase of% will be applied to your policy. This increase will be implemented over a two-year period. This letter is notification of the first increase of% that will occur on the date shown below. A second rate increase of an additional% will occur one year after the first rate increase. We will notify you at least 60 days before the second premium rate increase occurs.
	2nd of 2 rate increases: An overall rate increase of% will be applied to your policy. This increase will be implemented over a two-year period. The first increase of% occurred one year ago. This letter is notification of the second increase of% that will occur on the date shown below.
	1st of 3 rate increases: An overall rate increase of% will be applied to your policy. This increase will be implemented over a three-year period. This letter is notification of the first increase of% that will occur on the date shown below. A second rate increase of an additional% and third rate increase of an additional% will occur one year and two years, respectively, after the first rate increase. We will notify you at least 60 days before the second premium rate increase occurs.
	2nd of 3 rate increases: An overall rate increase of% will be applied to your policy. This increase will be implemented over a three-year period. The first increase of% occurred one year ago. This letter is notification of the second increase of% that will occur on the date shown below. We will notify you at least 60 days before the third premium rate increase occurs.
	3 rd of 3 rate increases: An overall rate increase of% will be applied to your policy. This increase will be implemented over a three-year period. The first increase of% occurred two years ago and the second increase of% occurred one year ago. This letter is notification of the third increase of% that will occur on the date shown below.
